Searching for reliable parental control or employee monitoring software for Mac? *Perfect Keylogger for Mac* is what you need. This is the only Mac keylogger offering so complete set of monitoring features! It invisibly records keystrokes typed, IM chats (both ways), websites visited, makes screenshots and much more. It also fully supports email notifications and is able to send all activity recorded to your website. This program would be useful for anyone who needs a covert surveillance solution for Mac. More details are available at **www.blazingtools.com/mac_keylogger.html**

Right Zoom for Mac OS X 1.81 *(freeware by BlazingTools Software)*

Due to strict «sandboxing» limitations introduced by Apple since June 2012, the system utilities like Right Zoom cannot be published on Mac AppStore.

Developer's home page: http://www.blazingtools.com/right_zoom_mac.html
Application requirements: *Mac OS X 10.5-10.9.*
If you have Mac OS X 10.4, please find a compatible version on our website
www.blazingtools.com/downloads.html#RightZoom

This version of RightZoom is running in 64-bit mode by default, you can set it to run in 32-bit mode by changing the app properties in Finder.

Right Zoom utility is created for people who don't like a default behaviour of green Zoom button in Mac OS X programs. This small program changes its behaviour, so a green button will always maximize your windows instead of inconvenient resizing. The program changes a behaviour of most used applications like Finder, Safari, MS Word/Excel/PowerPoint, Pages, Numbers. Those applications are most annoying examples of inconvenient zoom button behaviour. You can extend the list with more applications. You can also use **Command + Option (=Alt) + E** keys to maximize/restore the current active window in most applications. You can set this Zoom button behaviour for all applications, just customise the options.

Right Zoom was not tested with every possible application, so don't expect it to be ideal. We recommend to use it only with applications you need to tweak, and make sure it doesn't cause any side effects there.

If you want to send a donation for this app, just buy any of our shareware tools (starting from $10) at www.blazingtools.com

Installation: copy the program file into *Applications* folder and run it. You will need to enter your Administrator password to allow the program to interact with other applications.
On OS X Mavericks, you'll need to approve the application in *System Preferences > Security and Privacy > Privacy > Accessibility.* Click the Lock icon there, then check Right Zoom application.

The options window will appear on the first launch, click *Activate Right Zoom* checkbox there, then *Apply* and *Close buttons.* You can also adjust another options of your choice.

The program runs without a graphical interface and takes a minimum of system resources. If you would like to stop/close the program, double-click its icon, uncheck *Activate Right Zoom* checkbox and click *Apply,* then *Close* buttons.

Removal: just stop/close the application and delete its file.

To change the program options at any time, just launch **Right Zoom** app

<- *Application's options*

Known limitations: if you click Zoom button inside inactive application, Right Zoom may not work. Activate the application first by clicking its window title.

If you have more than one monitor and something is not working for you, please let us know.

If you'll find any problems with another applications while RightZoom is running, please report that to us. **Most of Adobe apps are known to be incompatible with Right Zoom, we hope that should be eventually fixed from Adobe side.**

You can add a problematic application to Exclusions and it should be OK, or use the program in «hold a key + zoom it» mode.
